Feature 1: Card Animation
There should be an animation of the card deck being shuffled and the cards being dealt. Once the cards are selected, they should have an animation for them being flipped over.

Feature 2: Glowing Cards
Cards should glow or change color to a 'magicky' color (like purple) when the card is selected. The cards should be selected by clicking on them. If the card is selected, the card should glow and continue to glow when the cursor is off the card. This helps indicate which cards are chosen. Click on the card again to deselect and stop the glow.

User Story: As a person who can't afford to waste money on fortune tellers, I want to use a fortune telling website, so that I can get the "authentic" fortune telling experience without paying money.

This user might want:
- The experience of greeting the fortune teller
- Interacting with the cards
- Seeming like their input matters for the fortune result

- See the fortune teller 'think' about the cards before giving the results
- Want the text/speech to be in a mystical style of writing, rather than plain
